Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nesvadba, US Patent No. 5488117.

Nesvadba discloses polymeric compositions comprising furanone stabilizers that directly correspond to those of applicant's claims. Patentee indicates that the stabilizers may be used in styrene/butadiene polymers and that the polymeric compositions may include organic phosphites, hindered phenols and/or aromatic amines. Patentee discloses the polymers in a generic sense and is therefor silent as to the shape of the polymers, however the use of any specific shape of polymer would be included in the polymers suggested by patentee, including star-shaped. The benzofuranone stabilizers are used in amounts ranging from .0001 to .015 weight % of the polymer to be stabilized. The costabilizers are used in amounts ranging from 0.01 to 10.0% based upon the weight of the polymeric matrix. Patentee does not indicate any specific need for pH adjustments to produce the compositions of the invention, and it is expected that none would be necessary unless such an adjustment provides some level of unexpected results. Applicant has not clearly shown that adjusting the pH of the composition during the preparation stage, by using CO₂ and water, provides unexpected results. See col. 10, line 21 through col. 11, line 25, col. 13, lines 20 -67, col. 14, lines 9-26, col. 17, lines 27-44, Example 8
